Patient-Specific Designs Tailored to Your Needs

Patient-Specific Plates

Material	Titanium
Manufacturing process	CNC machined
Thickness	0.8 mm to 2.0mm based on surgeon's needs

Why TECHFIT Patient-Specific plates?

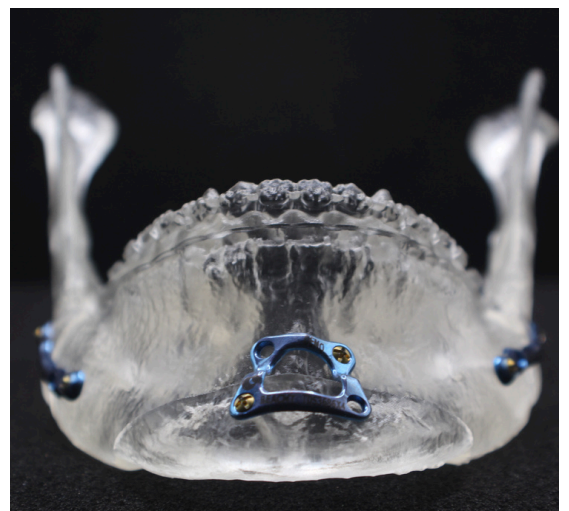

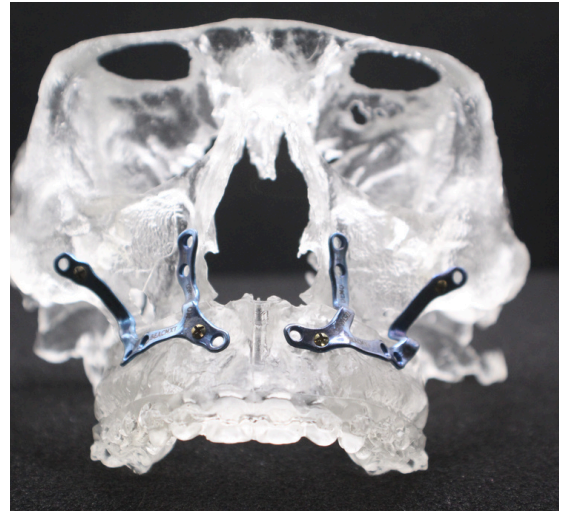

- Flexibility: Our plates are as flexible as standard systems
- Time Savings: Made in the US
- Significant time savings, enabling you to enhance productivity and patient care.
- Satisfactory aesthetic results
- Streamlined Process: DISRP simplifies orthognathic surgery planning to a single step

To ensure the correct functioning of the implants, the surgeon must follow the specific surgical techniques and follow the indications of the system.

Techfit Digital Surgery supplies the products non-sterile and requires sterilization before use following the manufacturer's specifications and recommendations.

Experience the Best of Both Worlds:

Our plates combine the flexibility of standard designs with the precision of patient-specific customization, giving surgeons unparalleled freedom during surgery.
